

A SnickarPer Interior Door - Care and Maintenance

Thank you for choosing a SnickarPer door. To ensure you get the best possible performance from your door, please read these care and maintenance instructions carefully before installation. Several of our products must be fully finished prior to installation. When installing the door, the installation instructions must be followed carefully, step by step.

Painted Interior Doors

Painted interior doors normally require only general cleaning using a damp cloth and a mild detergent or soap solution.

Any paint damage should be repaired immediately to prevent further deterioration.

Veneered Interior Doors

Veneered interior doors normally require only general cleaning using a lightly damp cloth and a mild detergent or soap solution. Clean from top to bottom and use as little water as possible.

Any damage to the lacquer finish should be repaired using a suitable synthetic clear lacquer in an appropriate gloss level.

Important Notice

No warranty applies to any surface treatment not performed in the factory.

Unfinished and untreated products (e.g. oiled surfaces) must always be properly surface-treated prior to installation (see product-specific care instructions).

If untreated products are installed before surface treatment, this is considered incorrect handling of the product, and will void both manufacturing warranties and any other applicable guarantees.
